

The following is a collection of 15 games I compiled from the 2013 Kansas Open. The effort took quite a number of hours. Selection criteria was first, I wanted to put as many games as I could by Conrad Holt. There are four of his games: two at the beginning and two at the end. The next criteria for inclusion was being able to read the score sheets and follow the game. The games had to contain no mistakes in notation. Having two copies of score sheets helped. A couple of games I had to piece together with a logical sequence. The games had to be interesting. I tried to have some games from the Reserve section, but admit with many of the games in this section had obvious errors that decided the games (I did include one of those games). I found many games in the Open section that ended in draws that I did not include. That is my next project to go through all these drawn games. I included mainly decisive games. I hope you enjoy the games. If you have a game that you thought was worthwhile and I did not include it please e-mail me at wlcoker7@hotmail.com
